1-“Recommended Monthly Page Volume” is a range of pages that helps customers evaluate Toshiba’s product offerings based on the average number of pages customers plan to print on the device each month. Toshiba recommends that the number of pages per month be within the stated range for optimum device performance, based on factors including: supplies replacement intervals, paper loading intervals, speed, and typical customer usage.

2-“Maximum Monthly Duty Cycle” is defined as the maximum number of pages a device could deliver in a month using a multishift operation. This metric provides a comparison of robustness in relation to other Toshiba printers and MFPs.

3-Average standard page yield value declared in accordance with ISO/IEC 19752.

4-Actual Yield may vary based on other factors such as device speed, paper size and feed orientation, toner coverage, tray source, percentage of black-only printing and average print job complexity.
